

PHITS Y30A

**For Yaesu speaker SP-30
Three different acoustic foams
Better audio performance**

Phits is a set of acoustic foams designed to get a much clearer sound from your speaker.

The sound produced by the speaker reverberates backwards inside the cabinet and adds noise to your transceiver signal. Signals, as consequence, lose intelligibility. This noise usually occurs below 1000 Hz.

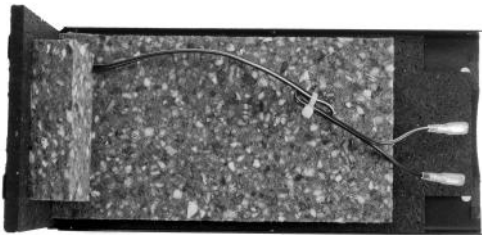

Phits reduces reverberation to a minimum level by absorbing sound and by increasing the speaker mass.

Phits Y30A

ASSEMBLY MANUAL

- Remove the lower and upper covers, and the front, carefully disconnecting the terminals.
- Place plate BK by passing the cable through the hole.

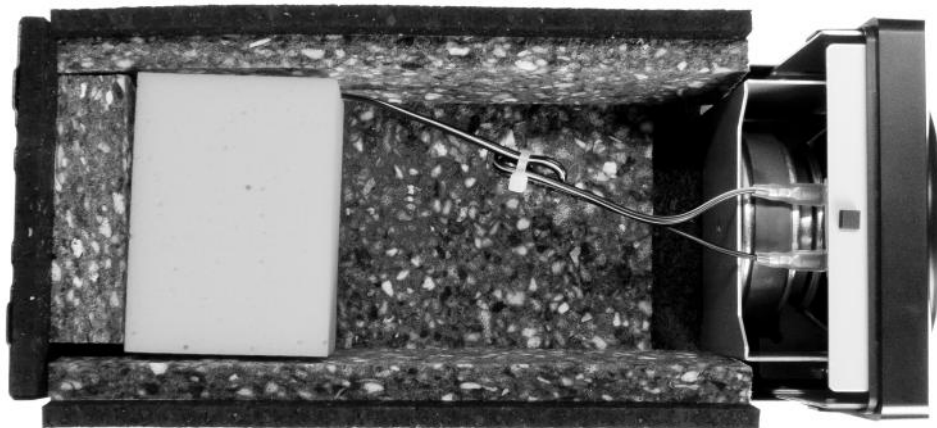

- Place plate B by pressing hard against plate BK. Plate B must fit perfectly into the base.

- Mount the front taking care the plate B fits as indicated in the photo. Mount the two screws on the bottom.

- Place plates L and R shown in the photo.
- Place the BST foam and reconnect the wires respecting the polarity. If it's more comfortable, you can release the bridle that holds them.

- Place plate T. Note that it fits on the front in the same way as it did on the B plate.
- Mount the top cover and fasten it with the screws. You must do this by pressing the cover tightly, thus ensuring the tightness between the plates.
